- Use caution and be aware of trip hazards created by cables
- Contains small parts (screws and screwdriver bits)
- If using with a Secure Entertainment Security case, Do not attach security cable directly to the case.

⚠️ **WARNING:**
CHOKING HAZARD
Not for children under 3 years.

Game Controller Security Bracket
Installation Instructions

XBOX Bracket   Playstation Bracket

Grab bracket part shown above and feed USB plug that connects to the controller through opening that lines up with the USB slot on the controller. Plug in the USB cable to the controller. Insert the barrel end of the security cable into the rectangular opening on the bottom of the bracket.

Align the bracket and game cable so it surrounds the top of the controller. Make sure to insert the cable into the round slot located at the top of the bracket.

Game Console and Entertainment
Security Devices

XBOX Bracket

Playstation Bracket

Next, take the bottom part of the bracket and place it onto the controller from the bottom making sure to align the security cable into the slot in the bracket.

From the top of the bracket. Insert the security screw and tighten using the screwdriver bit provided (screwdriver not included)

Please refer to the safety precautions on the first page before attaching the security cable to a secure surface

Option 1: Security Screw Installation

Pre-drill the hole that you will be using to attach the security cable using the provided security screw and washer. Insert the security screw into the hole of the washer and place this on top of the eyelet on the security cable and use a flathead screwdriver to screw in the screw into the secure surface. Be aware that these screws can only be tightened. If you wish to remove the cable from this surface at a later date, we suggest using a different screw of your choosing.

Plug in the usb cable to the game console and your gamers are ready to play!

Note: USB cables may come out of the controllers depending on high tension situations. If the controller will not turn on, be sure to check this first.

Please refer to the safety precautions on the first page before attaching the security cable to a secure surface

Option 2: Loop Through

Optionally, you can wrap the security cable around a secure piece of furniture. Simply wrap the cable around the location you want to install and pass through the USB and the other end of the security cable through the loop.

Plug in the usb cable to the game console and your gamers are ready to play!

Note: USB cables may come out of the controllers depending on high tension situations. If the controller will not turn on, be sure to check this first.
